

Queen's University

Assignment:
Quinterac part 3

Course:
CMPE 327

Prepared for:
Lecturer: Ding, Steven

Group Number:
23

Prepared by:
Adams Liu: 10187602
Eric Chau: 10141119
Ian Chang: 10190262

Due Date:
November 2nd, 2019

Template modifications

The template we decided to use was the second approach of the python testing framework. How we approached the testing was done by writing the test cases within the test script itself and creating a temporary valid account list file and a temporary transaction summary file.

Failure Report

The team decided to first start with test case "R6T1", we believed that it was best to pass one true case first and then develop the rest of the test cases after achieving at least one. Please see the excel spreadsheet to see the full details of the failure report.

(*Note: ETTO = Expected Tail of Terminal output, EOT = Expected output transaction)
